

# MERLIN INFLATABLES

## SPECIAL SHAPES FOR HELIUM FILLING

### Primary uses

Mainly used indoor although weather permitting they may be used outdoors as a highly visible site marker or as an attractive focal point. Indoor Special Helium Shapes are used widely in the exhibition industry to create maximum awareness of exhibitor's stands and art worked in large format to demonstrate a company's products or services.

The shapes have been used both indoors and outdoors at music festivals and are very popular floated in carnival and celebration parades. Retailers have found Inflatables to be invaluable marketing tools used at product promotions at their stores to attract the public.

The products are easy to operate and with a shelf life exceeding five years they can be used frequently.

### Product Description:

Constructed from 0.18mm Polyvinylchloride (PVC) high frequency welded gores shaped to form a predetermined shape. The products are as standard fitted with multiple strand nylon cord tether harnesses that enable the product to be centrally anchored. The harness anchor points are securely welded to the base structure. Simple two part non-return valves are fitted as standard for easy filling, and fast exhaust blow tubes to assist deflation. Strong tether line is supplied with the Inflatables and when deflated, folds down to less than the size of a brief case weighing approximately 16kg-25kg.

### Sizes.

Special Shapes can be supplied in various sizes and dependant on the complexity of the structure can vary from 2mtrs to 8mtrs.

### Options

Further special shapes can be found in the cold air filled section of the Merlin web site.
